Process Equipment Reliability Database Equipment Taxonomies Available Now

You can't effectively analyze equipment performance without data on maintenance, inspection, process demand, and more. And without a data structure—a taxonomy—you don't have useful information.

PERD Taxonomies provide a fundamentally sound structure to capture data in a consistent immediate analysis. They facilitate the understanding of what the raw data means or represents. PERD taxonomies:

- Help determine the right data to collect
- Provide a standard industry taxonomy, data field formats and validation
- Provide standard failure modes based upon rigorous and methodical functional analysis
- Provide intelligent inference of failure modes

Intelligen Suite

The Market-Leading Engineering Suite for Modeling, Evaluation, Scheduling, and Debottlenecking of Single & Multi-Product Facilities

SuperPro

Use SuperPro Designer to model, evaluate, and debottleneck batch and continuous processes

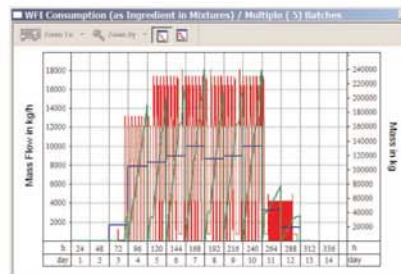

SchedulePro

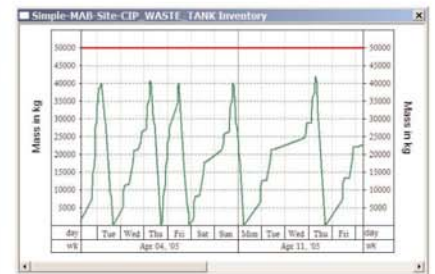

Switch to SchedulePro to schedule, model, and debottleneck multi-product facilities

Tracking of equipment occupancy in multi-product facilities

Tracking demand for resources (e.g., labor, materials, utilities, etc.)

Inventory tracking for raw materials, intermediates, products, and wastes

SuperPro Designer is a comprehensive process simulator that facilitates modeling, cost analysis, debottlenecking, cycle time reduction, and environmental impact assessment of biochemical, specialty chemical, pharmaceutical (bulk & fine), food, consumer product, mineral processing, water purification, wastewater treatment, and related processes. Its development was initiated at the Massachusetts Institute of Technology (MIT). SuperPro is already in use at more than 400 companies and 500 universities around the world (including 18 of the top 20 pharmaceutical companies and 9 of the top 10 biopharmaceutical companies).

SchedulePro is a versatile finite capacity scheduling tool that generates feasible production schedules for multi-product facilities that do not violate constraints related to the limited availability of facilities, equipment, resources and work areas. It can be used in conjunction with SuperPro (by importing its recipes) or independently (by creating recipes directly in SchedulePro). Any industry that manufactures multiple products by sharing production lines and resources can benefit from the use of SchedulePro. Engineering companies use it as a modeling tool to size utilities for batch plants, identify equipment requirements, reduce cycle times, and debottleneck facilities.
