## Mobile Application Offers Diaphragm Pump Support

The Versa-Matic mobile application supports air-operated double-diaphragm (AODD) pumps. With the mobile app, users can quickly and easily locate information related to the company's pumps. Data on a specific pump can be found through the My Pump Details module via manual code entry or

quick barcode scan. The mobile app offers an interactive guide to help the user review the pump's chemical compatibility. Training videos for service and repair work on the pumps are available through the application, which also provides access to the company's latest catalogs.

## Software Provides Data Management for Water Systems

The Water Information Management Solution (WIMS) Online provides data management, troubleshooting, and performance improvement for water systems. It can be accessed over the Internet from any Windows mobile device, tablet, or PC. It is user-friendly, with simple set-up requirements and information-sharing capabilities. Regular data backups give customers the peace of mind that their data are secure. WIMS Online is a cost-effective way to store and analyze data — as a monthly subscription service, customers pay only for the level of support that is required for their facilities.

## Online Training Program Facilitates Compliance with Hazard Communication Standard 2012

This web-based training module facilitates conformance with the employee training obligations outlined in the U.S. Occupational Health and Safety Administration's (OSHA) Hazard Communication Standard 2012 (HazCom 2012). HazCom 2012 requires employers to train their employees on the new label elements and safety data sheet (SDS) format by Dec. 1, 2013. The one-hour HazCom 2012 training module streamlines the process with an engaging and intuitive online training program. Employees who complete the course will better understand their role in meeting the HazCom 2012 requirements to improve worker safety.

## Free Application Provides Mobile Access to Technical Information

The Operations App allows maintenance technicians and engineers to quickly download specific operating instructions and technical information on the iPhone, iPod touch, and iPad mobile devices.

The free application delivers information for the company's instruments and analyzers from any location. The app provides product details such as order code, configuration information, date of production, product status and availability, manuals, and spare-parts information. After installing the app, the user simply enters the instrument's serial number or scans its data matrix code to retrieve the information. Documents and information on the app can be easily shared with colleagues via email.

A diagram of a Delta Cooling Tower with various components labeled. The labels include: 'Doesn't Rust or Corrode', 'Avoid Down Time Save on Maintenance', '15-Year Shell Warranty', 'Maximum Energy Efficiency', and 'Not Harmed by H2O Chemical Treatments'. The diagram shows a cross-section of the tower with internal components like fans and water distribution systems.

**We've Built a Better Cooling Tower.**

Delta Cooling Towers designed the first engineered plastic (polyethylene) cooling tower in 1971. Since then we've improved and expanded "The Most Durable Corrosion-Proof Cooling Towers Available" to a full line, factory assembled and ready for any application. Visit us at [www.deltacooling.com](http://www.deltacooling.com), or call 1.800.289.3358.
