Upcoming Meeting September 11, 2018

Pam Jordan will present “Pulp & Paper - We Use ChEs, Too”, an overview of unit operations in the kraft pulping and chemical recovery processes as well as current business trends in the pulp and paper industry. We all use various types of paper every day, but even as chemical engineers, how often do we think about the unit operations involved to make it? Kraft pulping is the dominant process by which wood chips are transformed into paper, whether it is for Amazon boxes or that wedding invitation. The chemical recovery process is important because it makes the kraft process economically viable.

Pam currently manages the process staff in Jacobs’ Multi-Projects Group in Greenville, SC. She earned a BSChE from North Carolina State University, is a member of TAPPI and has 29 years of experience in industry, mainly in Pulp and Paper. She started at Union Camp Corporation in Franklin, VA and moved to consulting with the former CRS Serrine which was acquired by Jacobs. Her experience in pulp and paper ranges from the kraft pulp mill through bleaching to the paper machines and the chemical recovery cycle.
