### **About Croda:**

Croda is the name behind the high-performance ingredients and technologies in some of the most successful brands in the world: creating, making and selling specialty chemicals that are relied on by industries and consumers everywhere. Croda is focused on delivering results centered on Innovation, Technology, and Sustainability.

The February meeting will provide an overview of Croda and the activities that occur at the Mill Hall manufacturing site. The site tour will give attendees an opportunity to see where our products are made and to ask questions of Croda employees.

### **Directions:**

You will turn onto Draketown road from Rt150 (Hogan Blvd). You will have to drive past the main office building and turn right at the Security Office. There, the Security guard will give you a visitor's badge and direct you on where to park. Visitor parking is next to Condo's Welding and Radiation, across the street from the main office building. You will then head to the main office building where a Croda employee will escort you to the meeting location.
