New York (USA)	15 December 2021	Wednesday	11:30 PM	1:00 AM	EST

Panel discussion will focus on:

- The impact of process safety management on an organization’s bottom line
- Best practices in driving a sustainable process safety management system
- Leadership in driving process safety as a keystone success factor for implementing PSM programs

Issues of process safety are present at all business levels. It actually requires clear accountability at all levels. It is a company board issue, and needs effective measurement systems, including indicators of process safety performance. So it is necessary, as part of the management of the operation, to actually pose questions such as what are your key business risks?, and do company board members take the same view as frontline managers and plant operators? Leaders’ Panel discussion will be aimed to foster dialogue to help others, and share ideas and experiences about how we can perform even better in the area of process safety.

Each panelist will make an opening remark following which views will be exchanged, both between the

panelists and the audience.
