

## At the ADM/AIChE Faculty Workshop

You will learn about:

- ADM operations and its safety journey over the last decade

- The business case for process safety and its importance outside the traditional CPI (Chemical Process Industries)

- Combustible dust with presentations from industry experts and examples of engineered solutions

- Layer of Protection Analysis

- A forensic explosion analysis

- The importance of process safety for chemical engineering and exploring ways to integrate it into the undergraduate curriculum

On your plant tours you will see:

- Lab operations

- Pilot operations

- Full scale operations

- Ethanol and anhydrous ammonia tanks farms and loading/unloading areas

- A flow test of the foam fire suppression system in the ethanol area

And while here you will:

- Have excellent food

- Meet new friends and collaborate with peers during breakout sessions
