

Webinar – Risk Management in the time of COVID-19

June 11, 2020 9–11 am Eastern Standard Time (14:00– 16:00 GMT+1 Summer time)

AON and the Center for Chemical Process Safety (CCPS) are presenting a Webinar on Risk Management in the time of COVID-19.

As COVID-19 continues, new challenges are being created for energy, petrochemical and chemical companies. While firms meet new challenges and adapt to new risks posed by the pandemic, the industry must continue its operations to provide energy and vital chemicals globally. Risks need to be better understood, managed and mitigated and operational frameworks adapted.

This webinar takes a look at some of the lessons already learned as well as best practices from both an insurance and process safety risk management perspective.

The webinar will cover:

- **Risk Identification / HIRA:** Are you identifying, prioritizing & managing the right risks? How can you conduct Hazard Analysis and Risk Assessment (HIRA) remotely or with reduced staff? How can you be sure there are no weak links?
- **Best Practices & Assessment:** Are you comparing/assessing against global best practice e.g. Risk Based Process Safety?
- **Workforce Involvement:** With limited resources, can you manage your response without taking valuable time from your operations teams? How are you effectively managing teams and asset changes?
- **Stakeholder Outreach:** How do you ensure effective communication of your risk management plan to internal and external stakeholders, including insurers?
- **Safety Culture:** Are you maintaining process safety sense of vulnerability? Does your leadership ensure employee engagement and involvement in a safety culture?
