NOTES:
1. Several modules are suitable for more than one engineering course. Please coordinate with other faculty. Example: Block A can be assigned to any of the first 3 core courses, or distributed within them.
2. Some courses (e.g. Organic Chem or Materials) may be outside of typical ChE departments but usually part of core requirements for Chemical Engineers. The assignments below should be shared across department boundaries.
3. Some courses go together as a group as indicated below and are related to each other.
4. It is highly recommended that all engineering graduates complete Block A at the beginning of their ChE education and Block F before graduation.
